

FreePeng Token Whitepaper

Version 0.1 - Draft for testnet planning

Disclaimer

FreePeng is an original penguin-themed meme token project concept. This document is for project planning and education. It is not financial advice, an investment recommendation, or a promise of profit. Crypto assets are risky and can lose all value.

Overview

FreePeng aims to combine a fun penguin mascot with transparent token mechanics, a simple website, and a test-first launch process. The project should not use any existing brand, political figure, protected logo, or misleading official association.

Token Details

Item	Planned Value
Name	FreePeng
Symbol	FPG
Network	BNB Smart Chain
Total Supply	1,000,000,000 FPG
Planned Tax	0%
Minting	No additional mint function in the template
Launch Order	Website -> Contract -> Testnet -> Review -> Mainnet

Distribution Plan

A possible distribution model is 70% community, 15% liquidity, 10% marketing, and 5% team allocation. Any team allocation should be disclosed publicly and ideally locked to reduce trust concerns.

Roadmap

Phase 1: Website, logo, whitepaper draft, and project repository.

Phase 2: BEP-20 contract template, local review, and BSC testnet deployment.

Phase 3: Community channels, contract verification, launch checklist, and liquidity planning.

Phase 4: Mainnet deployment and DEX launch only after testing and review.

Risk Notes

Meme tokens are high risk. Mainnet deployment, liquidity creation, marketing, and token sales may have legal and financial implications. The project owner should avoid misleading claims, guaranteed-profit language, hidden minting, fake partnerships, and sudden undisclosed token sales.

Next Steps

The recommended next step is to upload the website files, confirm the site works, then deploy the contract on BSC Testnet. Only after testing should a mainnet deployment be considered.
